# HARP2

Course #396

The Hotspots Analysis and Reporting Program (HARP) is a software suite used to assist with the programmatic requirements of the Air Toxics "Hot Spots" Program (Assembly Bill 2588). HARP2 can be used by California Air Pollution Control and Air Quality Management Districts, facility operators, and other organizations or individuals to promote statewide consistency, efficiency and cost-effective development of facility emission inventories and health risk assessments. For more information on HARP, please visit the HARP website at http://www.arb.ca.gov/toxics/harp/harp.htm.

This three-day class focuses on how to use the HARP2 – Air Dispersion Modeling and Risk Tool (ADMRT) and includes hands-on exercises as well as background information on air dispersion modeling using AERMOD and Office of Environmental Health Hazard Assessment's risk assessment guidelines.

It is highly recommended that students take ARB Course 296, or have experience in conducting HRA's, prior to attending the class. It is also highly recommended that students should be familiar with Microsoft Excel and generally comfortable with computers and the Windows operating system. In order to cover the material in the available time it's essential that student are proficient with these applications.

Please note a laptop computer with HARP2 installed is required for this class.

Please register online at www.arb.ca.gov/training and click on the Registration button.

DATE / TIME / LOCATION

January 10-12, 2017
8:30 to 5:00 PST

ARB – Depot Park
8340 Ferguson Ave
Sacramento, CA
